

octoBox™ HDMI Filter Datasheet

HDMI filter suppresses 700 MHz to 6 GHz test frequencies

HDMI filter is an optional filter for the octoBox that allows you to view the video generated by a device inside the chamber without compromising the chamber isolation.

FEATURES & BENEFITS

- ✚ Supports HDMI 1.4
- ✚ Suppresses 700 to 6000 MHz
- ✚ Ensures octoBox isolation exceeds 80 dB even with the HDMI cables connected through the filter
- ✚ Precision machined aluminum enclosure
- ✚ Nickel plated
- ✚ Internal gasketing ensures high integrity seal of the filter enclosure
- ✚ External gasketing ensures high integrity seal of the filter to the octoBox

High speed data filters are required for connecting cabling such as HDMI, Ethernet, USB and power through the wall of the octoBox to the equipment placed inside.
