RSWM-8X8R

Wideband Non-Blocking 8X8 Switching Matrix 20 MHz … 4000 MHz

Features

- high dynamic
- high isolation
- non-reflective
- compact 19”, 1 U design
- graphical user interface

Applications

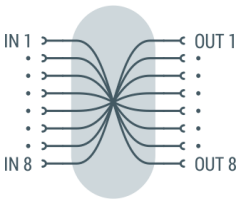
- radio monitoring
- infotainment test
- research & development (R&D)
- test equipment

At a Glance

Modern signal routing systems need an unrestricted access to different signal sources like antennas or signal generators. In receiving systems the large amount different analogue and digital modulated signals like broadcast, cellular, Wi-Fi, ISM and Bluetooth need high linearity for a low distorted transmission. Additionally, a low noise figure is very important for a high dynamic range. The RSWM-8X8R is an innovative and efficient solution for modern radio monitoring and signal routing systems that must cover the frequency range up to more than 4 GHz. To enable a free access to many signal sources like antennas or signal generators it offers a non-blocking switch system which allows the combination of any input with every output in a flexible and easy way.

Principal Block Diagram

The RSWM-8X8R has 8 equivalent inputs and 8 equivalent outputs interconnected with a non-blocking matrix. Furthermore one input can route to several outputs without any loss of transmission.



Wear-free Solid-State Switches

Inside the RSWM-8X8R modern solid state switching elements are integrated. This ensures a quick response to operating inputs and a huge number of switching cycles with a minimum of maintenance.

High Channel Isolation

To avoid unintended coupling between different types of signals the device offers a high channel isolation. Adjacent radio channels with strong and weak signals have no influence to each other.

Versatile Control

To control and operate with RSWM-8X8R the device is equipped with a local MMI on the front panel as well as LAN and USB interfaces. Suitable to the customer’s application the user is able to manage the system either through the associated and intuitive web-based user interface or with SCPI-based ASCII-commands via its interface ports.

Synchronous Operation

The RSWM-8X8R offers two switching modes:

- Direct switch execution after receiving single commands.
- Common synchronous switching after executed by a SYNC command.

In synchronous mode all upcoming switching operations are done only after receiving a SYNC command.

External Triggering

Like many other products of Becker Nachrichtentechnik GmbH, the RSWM-8X8R offers a TRIGGER IO port. Due to the physical interface the device features a synchronous execution of switching operations in a compound of many matrices, triggered by hardware.

Application Examples

The RSWM-8X8R is suitable for both radio monitoring applications as well as test environments for research and development. Aided by the RSWM-8X8R the customer is able to route input signals to any output of the device. As the illustration shows the input can either be equipped with different signal sources or antennas:
