

Customized Optical Fiber Solutions for Network Simulation and Latency Applications

Accurate Results

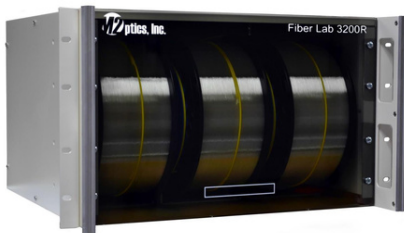

Greater Efficiency

Significant ROI

Enhance Your Capabilities with Fiber Lab

Exactly Replicate Optical & Latency Performance

Offering all fiber types and lengths, these essential network simulators immediately improve fiber management and deliver consistent results for testing and demo initiatives.

Easily Solve Latency & Timing Challenges

Deploy high-precision optical time delays and save valuable rack space when needing to fine-tune signal timing, tier service speeds, or equalize link latency in your network.

Grow Your Team's Fiber Testing Expertise

Designed for instructors and students alike, portable Fiber Lab training simulators bring field network spans into the classroom, making OTDR and test device training a breeze.

Every Fiber Lab is Customized to Your Needs

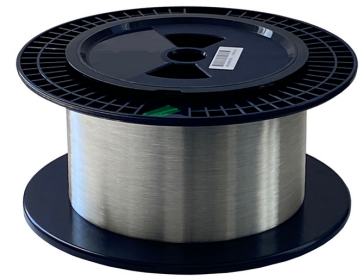

Many Enclosure & Fiber Packaging Styles to Choose From

- Rack-mount, Portable, Modular, Harsh Environment, and more
- Efficient designs maximize setup efficiency for any application

Unparalleled Access to All Fiber Types and Brands

- Corning®, OFS®, Prysmian®, Sumitomo®, and others
- Single-mode, Multimode, Specialty, Ribbon, and more
- Special sourcing relationships - improved lead times and fiber info

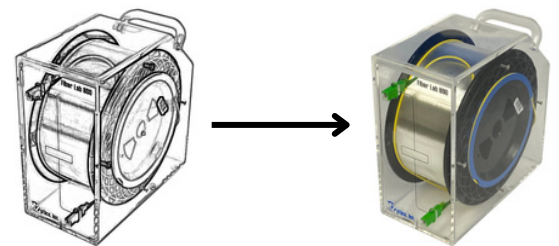

Accurate Fiber Lengths and Unlimited Setup Configurations

- High-precision lengths by distance or latency/delay value
- Tx/Rx, longer continuous lengths, integrated components, etc.

Rapid Product Design & MFG Services

Leveraging advanced design, manufacturing, and testing capabilities with extensive fiber expertise, M2 quickly brings new ideas to life, provide re-designs, or create non-standard parts & prototypes while saving you time and money.

Experience Immediate, Proven Benefits

- Ensure consistent, reliable optical performance
- Improve fiber management, identification, and use
- Save maximum physical space via efficient designs
- Protect valuable fiber from accidental damage
- Maximize the total ROI of your valuable fiber
